                                                                              2 Polypeptides (AAW01821 and AAW01822) respectively comprise primatised forms of the light and heavy chains of cynomolgus monkey anti-human BT.1 antigen monoclonal antibody 16C10. Cloned 16C10 light and heavy variable genes (see also AAT62512 and AAT62513) are inserted into an expression vector (pref. NEOSPLA) which contains human light and heavy chain constant region genes to allow prodn. of the primatised antibodies have also been produced (see also AAW01817-20). The primatised antibodies inhibit the B7:CD28 pathway, making them useful immunosuppressants for the treatment of autoimmune disorders and graft-versus-host disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    420
                                                                                                                                                                                                                                                                                                                                                                                            180

This sequence represents a primatized form of the antibody 16C10 heavy chain from macaque. This sequence is used in a method which studies new concolonal antibodies (NAb's) that bind selectively to B7.1 (CD80) or to B7.2 (CD86) antigens and inhibits binding of these antigens to CD28. Such CC B7.2 (CD86) antigens and inhibits binding of these antigens to CD28. Such CC T cell/B cell interactions, particularly autoimmune disease, specifically idiopathic thrombocytopaenia purpure, systemic lupus erythematosus, type idiopathic thrombocytopaenia purpure, systemic lupus erythematosus, type idiopathic thrombocytopaenia purpure, systemic lupus erythematosus, type idiopathic thrombocytopaenia purpure, systemic lupus erythematosus, thematory bowel disease, allergy and multiple sclerosis, graft vs. inflammatory disease and tumours. Optionally the deficiency virus) or inflammatory disease and tumours. Optionally the deficiency virus or inflammatory disease and tumours. Optionally the also be used as imaging agents and as vaccines or immunogens to develop anti-idiotype reagents. NAb's are optionally combined with other proteins or small molecule immunosuppressants. Blocking B7/CD2 interactions induces long-term, antigen-specific immunosuppression, i.e. it inhibits production of interleukin-2 (IL-2), T cell proliferation and autigen-specific immunoglobulin G (IgG) responses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to a new use of a monoclonal antibody which specifically binds to B7.1 antigen (CD80) and/or B7.2 antigen (CD86) for inducing the apoptosis of B7+ cells. The invention is useful for treating diseases such as B cell cancer, lymphoma, a cancer where B cells promote the growth and/or metastasis of tumours, B cell lymphoma, B cell lymphoma, B cell lymphoma, B cell lymphoma, B cell sexases such as B cell sexases such as a manala, inflammatory bile disease, altergy, multiple sclerosis, type I diabetes mellitus, rheumatoid arthritis, psoriasis, aplastic anaemia, inflammatory bile disease, allergy, multiple sclerosis or graft-vaehost disease. The antibody is useful for immunosuppression in a human or animal and for treating or preventing resistance to or rejection of transplanted organ or tissue for treating proliferative airways disease, intestinal inflammations and allergies e.g. Crohn's disease and ulcerative diseases, for treating reversible obstructive airways disease, intestinal inflammations and allergies e.g. Crohn's chinits and eczema, and other types of allergies. The present protein sequence represents the heavy chain of 16Cl0, a primatised antibody in the invention to induce apoptosis and inhibit production of
                                                                                                                                                                                                                                                                                                                                                                                                           Protein sequence of primatised form of the heavy chain of 16C10 antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; macaque monkey; light chain; primatised antibody; 16C10 antibody; neuroprotective; apoptosis inducer; allergy; CD28 receptor antagonist; B7_1 antigen; CD80; B7_2 antigen; CD86; B cell cancer; metastasis; tumour; B cell lymphoma; B cell leukaemia; autoimmune disease; graft-vs-host disease; immunosuppression; organ rejection; interleukin-2; IL-2; mutant; mutein.

                                                                                                                                                                                                                                       4
                                    The present invention provides the coding and protein sequences for a number of human immune system associated proteins (HISAPs). These can be used in the diagnosis and treatment of various autoimmune disorders, infections and cell proliferation diseases. The diseases include AIDs, adult respiratory distress syndrome, anaemia, asthma, atherosclerosis, cronn's disease, irriteable bowel syndrome, multiple sclerosis, myasthenia gravis, osteoarthritis, theumacoid arthritis, scleroderma, systemic lupus erythematosus, arteriosclerosis, cirrhosis and cancer.

2 Polypeptides (AAW01817 and AAW01818) respectively comprise primatised forms of the light and heavy chains of cynomologus monkey anti-human B7.1 antigen monoclonal antibody 7C10. Cloned 7C10 light and heavy variable genes (see also AAT62509 and AAT62510) are inserted into an expression vector (pref. NEOSPLA) which contains human light and heavy chain constant region genes to allow prodn. of the primatised antibody in e.g. CHO cells. Primatised 7B6 and 16C10 anti-B7.1 antibodies have also been produced (see also AAW01819-22). The primatised antibodies inhibit the B7:CD28 pathway, making them useful immunosuppressants for the treatment of autoimmune disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      300

This sequence represents a primatized form of the antibody 7C10 heavy chain from macaque. This sequence is used in a method which studies new monoclonal antibodies (Mab's) that bind selectively to B7.1 (CD80) or to B7.2 (CD86) antigens and inhibite binding of these antigens to CD28. Such Mab's are specific immunosuppressants for treatment of diseases involving T cell/B cell interactions, particularly autoimmune disease, specifically idiopathic thrombocytopaenia purpura, systemic lupus erythematosus, type I diabetes mellitus, rheumatoid arthritis, psoriasis, aplastic anaemia, inflammatory bowel disease, allergy and multiple selerosis, graft vs. host diseases, B cell lymphoma, infections (including by human immune deficiency virus) or inflammatory disease and tumours. Optionally the Mab on be conjugated to a drug or toxin. Mab's, or their fragments, can also be used as imaging agents and as vaccines or immunogens to develop anti-idiotype reagents. Mab's are optionally combined with other proteins or small molecule immunosuppressants. Blocking B7/CD28 interactions production of interleukin-2 (1L-2), T cell proliferation and entigen-specific immunosuppression, i.e. it inhibits antigen-specific immunosuppress. 476 AA; Seguence

WPI; 2002-089895/12. N-PSDB; AAS17243 Use of monoclonal antibody which specifically binds to B7.1 antigen CD80 and/or B7.2 antigen CD86 for inducing apoptosis of B7+ cells, treating cancer, graft-vs-host disease and autoimmune disease such as allergy

Example 8; Fig 3b; 89pp; English.

The present invention relates to a new use of a monoclonal antibody which specifically binds to B7.1 antigen (CD80) and/or B7.2 antigen (CD86) for inducing the apoptosis of B7+ cells. The invention is useful for treating diseases such as B cell cancer, lymphoma, a cancer where B cells promote the growth and/or metastasis of tumours, B cell lymphoma, B cell leukaemia, and autoimmune diseases such as idiopathic thrombocytopenia purpura, systemic lupus, erythematosus, type 1 diabetes mellitus, rheumatoid arthritis, psoriaeis, aplastic anaemia, inflammatory bile disease, allergy, multiple sclerosis

ö
or graft-vs-host disease. The antibody is useful for immunosuppression in a human or animal and for treating or preventing resistance to or rejection of transplanted organ or tissue for treating proliferative and hyperproliferative diseases, for treating reversible obstructive alivable disease, intestinal inflammations and allergies e.g. Crohn's disease and ulcerative colitis, food-related allergies e.g. migraine, rhinitis and eczema, and other types of allergies. The present protein sequence represents the heavy chain of 7C10, a primatised antibody used in the invention to induce apoptosis and inhibit production of interleukin-2 (IL-2).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      420

The sequences given in AAR93553-54 represent the heavy and light chains respectively of a monoclonal antibody against a 65 kD antigen of human cytomegalovirus (hCMV). The DNA's encoding these sequences were amplified using the sequences given in AATI8040-58. The monoclonal antibody may be used in the diagnosis of hCMV.

Immune system molecules used in the diagnosis, treatment and prevention of disorders associated with the immune system and cell proliferation
                                                                                                                                                                                   The present sequence is an immune system molecule, ISMO-2 from an Incyte clone 2849752 isolated from the human breast tumour cDNA library (BRSTTUT13). This sequence is expressed in several libraries, generally those associated with cancer, cell proliferation, immune response or trauma. It shows homology to vertebrate immunoglobulin gamma heavy-chain. The present sequence is useful in the diagnosis, treatment and prevention of disorders associated with the immune system and cell proliferation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human monoclonal antibody; immunoglobulin isotype IgM; agglutination; rhesus positive; rhesus negative; haemolysis; gamma 1 heavy chain; variable region; insect host cell; baculovirus; recombinant production.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PGKGLEWIGSFYSSSGNTYYNPSLKSQVTISTDTSKNQFSLKLNSMTAADTAVYYCVRDR 120

```

œ

```
The sequence is that of the reshaped CD4 antibody heavy chain CD4VHNEW-Ser30. Reshaped CD4 antibody can be used to induce tolerance against an antigen. It can also be used to alleviate autoimmune diseases such as rheumatoid arthritis, and to prevent graft rejection. Tolerance to a graft, e.g. an organ graft or a bone marrow transplantation can also be useful to alleviate allergies. Tolerance to allergens could also be achieved. See also AAR22753-R22763.

The antibody agglutinates rhesus positive cells but not rhesus negative cells and is useful diagnostically and also for preventing haemolysis in new-born rhesus positive babies. Recombinant IgM-D7C2 can be produced by insect cells which have been transformed by a baculoviral vector comprising a D7C2 expression cassette. The present sequence is that of a recombinant IgM-D7C2 heavy chain fused downstream of a mouse VH signal peptide.

The sequence is that of the reshaped CD4 antibody heavy chain CD4VHNW-Thrid). Reshaped CD4 antibody can be used to induce tolerance against an antigen. It can also be used to alleviate autoimmune diseases such as rheumatoid arthritis, and to prevent graft rejection. Tolerance to a graft, e.g. an organ graft or a bone marrow transplantation can also be useful to alleviate allergies. Tolerance to a useful to alleviates allergies. Tolerance to allergens could also be achieved. See also AAR22753-R22763.

                                                                                                                                                                                                                                                                                                                                          Reshaped CD4 antibody can be used to induce tolerance against an antigen. It can also be used to alleviate autoimmune diseases such as rheumatoid arthritis, and to prevent graft rejection. Tolerance to a graft, e.g. an organ graft or a bone marrow transplantation can also be useful to alleviate allergies. Tolerance to allergens could also be achieved. See also AAR22754-R22763.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        3 Polypeptides (AAW14925-27) respectively comprise the heavy chain regions of human gamma-4, gamma-4E carrying an L236E mutation in the hinge region, and gamma-4PE carrying L236E and $229P mutations. They can be incorporated into novel monoclonal and chimeric antibodies, e.g. CE9 gamma-4, CE9 gamma-4E and CE9 gamma-4PE, in which the human 1964 Rc binding domain framework is combined with the antigen binding domains domain framework is combined with human CD4 monoclonal antibody E9.1. These antibodies show high affinity to human CD4, have little or no immunogenicity in humans and show reduced or absence of effector function. The gamma-4E and -4PE mutations confer activity enhanced stability and eliminate depleting activity. The antibodies can be used to treat autoimmune
                                                                                                                                                                                                                                                                                              CD4; monoclonal antibody; chimaeric antibody; recombinant antibody; cynomolgus monkey; autoimmune disease; rheumatoid arthritis; leukaemia; lymphoma; graft-versus-host disease; asthma; transplant rejection; HIV; therapy; CE9 gamma 4PE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 MKHLWFFLLLVAAPRWVLSQVQLQESGPGLVKPSETLSLTCAVSGGSISGGYGWGWIRQP

```

3 Polypeptides (AAW14925-27) respectively comprise the heavy chain regions of human gamma-4, gamma-4E carrying an L236E mutation in the hinge region, and gamma-4PE carrying L236E and S229P mutations. They can be incorporated into novel monoclonal and chimeric antibodies, e.g. CE9 gamma-4, CE9 gamma-4E gamma-4PE, in which the human IgG4 Fo binding domain framework is combined with the antigen binding domains (see also AAW14922-23) of macaque anti-

Sequence 6, Application US/09747669

Patent No. US20020122807A1

GENERAL INFORMATION:

APPLICANT: Dan, Michael D.

APPLICANT: Dan, Michael D.

TITLE OF INVENTION: ANTIGEN BINDING FRAGMENTS, DESIGNATED

TITLE OF INVENTION: AND DETECTION OF CANCER CELLS, NUCLEOTIDES

TITLE OF INVENTION: AND DETECTION OF CANCERS

FILE REFRENCE: 316082001001;

CURRENT FILING DATE: 2002-04-08

PRIOR PILING DATE: 1998-07-07

NUMBER OF SEQ ID NOS: 7

SOFFWARE: FRAGEE FRAGE OF WINDOWS VERSION OF CANCERS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

GENERAL INFORMATION:
TITLE OF INVENTION: 28 Human Secreted Proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 70, Application US/09853161
Patent No. US20020076756A1
GENERAL INFORMATION:
APPLICANT: ROSEN et al.
TILE OF INVENTION: 28 Human Secreted Proteins
FILE REFERENCE: PZ003P3
                                                                                                                                                                                                                                         THE REPERBUCE: P2003P2
